LIGHTING SPECIALIST

## Manual For Easilight RGB Zone Receiver, & Easilight RGBW Zone Receiver

MS-F037,MS-F038

### 1. Features

Compatible with our EasiLight range of lights and remotes, both the RGBW receiver and the RGB receiver make use of 2.4GHz wireless technology, which means you get to benefit from low power consumption, longer signal transmissions and stronger anti-interference protection.

#### RGB Model

Choose from 16 million colours

Remote controllable from up to 30m away

Mix red, green and blue light for a range of colour temperatures

Smartphone app controllable (with 2.4GHz gateway)

Dimmable- choose multiple brightness and saturation levels

Third party voice control compatible (with 2.4GHz gateway)

2.4G RF wireless transmission

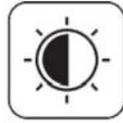

## RGBW Model

Choose from 16 million colours, including pure white light

Remote controllable from up to 30m away

Dimmable- choose multiple brightness and saturation levels

Smartphone app controllable (with 2.4GHz gateway)

2.4G RF wireless transmission

Third party voice control compatible (with 2.4GHz gateway)

## 2. Dynamic Mode Table

Both receivers give you access to a range of different programs, letting you effortlessly choose how your lighting looks at the touch of the button.

Note: whichever mode you select, the colour can be dimmed to your liking. You can also adjust the speed.

If you have an RGB model, you can still enjoy the RGBW mode, and other modes that use white light. It's just important to note that any white light created is made from a mix of red, green and blue. That means it is not a pure white.

### 1. Fade In & Fade Out

Different colours fade into each other

### 2. Strobe White

White light flashes

### 3. RGBW Fade In and Fade Out

Red, green, blue and white light fade in and out one after the other

### 4. Colour Flash

Red, green, blue, white, yellow and purple light flash into each other

### 5. Disco

Different colours strobe and flash to new colours

### 6. Red Ramps Up and Flashes

Red light brightens from 0-100%, dims suddenly, then flashes 3 times

### 7. Green Ramps Up and Flashes

Green light brightens from 0-100%, dims suddenly, then flashes 3 times

### 8. Blue Ramps Up and Flashes

Blue light brightens from 0-100%, dims suddenly, then flashes 3 times

### 9. Colour Change & Flash

Several colours fade into each other and then flash randomly

# 3. Linking & Unlinking Instructions

## To Link Your Receiver To A Remote

If the light is not blinking slowly, then the linking has not been successful. Please follow the above steps again.

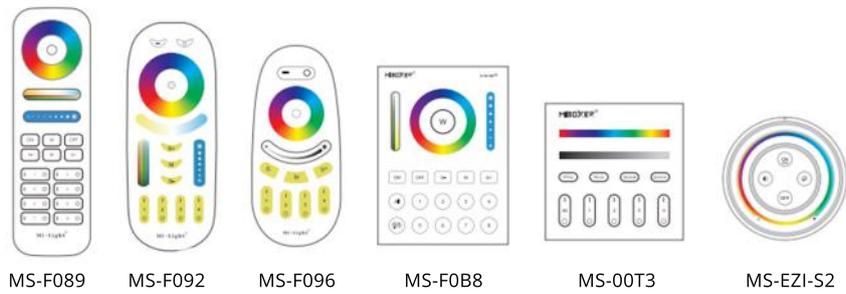

**Please note:** Lights that have been linked cannot be linked again. You must unlink them from one remote before linking to a new one.

## To Unlink Your Receiver From A Remote

If the light is not blinking quickly, the unlinking has not been successful. Please follow the above steps again. You may need to check that your lights aren't already linked to another remote, or that you haven't unintentionally unlinked lights that didn't need to be.

# Compatible With These Remote Controls (sold separately)

## 4. Instructional Videos

If you want to learn how to pair your controller with a smartphone app, or with a third-party voice control system, you can scan these QR codes to watch an instructional video!

Smartphone app control  
(WL-Box1 video)

Third party voice control

## 5. Attention

1. Please ensure that the voltage of your power supply is in accordance with the needs of the product, otherwise it will break. You should also check the connection of both the cathode and the anode for any faults before turning the power on.
2. Never connect wires while the power is on.
3. Only turn the power on when the connections are correct and there is no short circuit.
4. Only professional electricians should dismantle these fixtures.
5. Do not use the light in a location with strong electromagnetic waves nearby, or else the remote distance will be seriously affected.
